

ABSTRAK

Penelitian ini tentang partisipasi petani terhadap program ketahanan pangan di Subak Pulagan Desa Tampaksiring Kecamatan Tampaksiring Kabupaten Gianyar. Penelitian ini bertujuan untuk mengetahui bagaimana Partisipasi petani terhadap program ketahanan pangan, faktor – faktor apa saja yang berpengaruh dengan partisipasi petani terhadap program ketahanan pangan di Subak Pulagan Desa Tampaksiring Kecamatan Tampaksiring Kabupaten Gianyar. Penentuan responden dalam penelitian ini menggunakan metode *simple probability sampling* (secara acak) dengan jumlah responden 35 orang, penelitian ini menggunakan metode: (1) Skala *Likert* Partisipasi petani terhadap program ketahanan pangan.,(2) menggunakan metode regresi linear berganda untuk mengetahui faktor – faktor apa saja yang berpengaruh dengan partisipasi petani terhadap program ketahanan pangan di Subak Pulagan Desa Tampaksiring Kecamatan Tampaksiring Kabupaten Gianyar. Hasil penelitian menunjukkan bahwa Partisipasi petani dalam perencanaan, pelaksanaan dan pemanfaatan program ketahanan pangan di subak Pulagan adalah Tinggi, sedangkan partisipasinya dalam evaluasi masih dalam kategori sedang. Secara keseluruhan Partisipasi petani terhadap program ketahanan pangan di subak Pulagan adalah tinggi, dengan rata-rata presentase pencapaian skor yaitu 3,89%. Umur petani dan Pendidikan formal tidak signifikan pengaruhnya terhadap Partisipasinya dalam program ketahanan pangan. Jumlah anggota keluarga dan luas lahan garapan petani sangat nyata pengaruhnya terhadap Partisipasinya dalam program ketahanan pangan. Semakin tinggi Jumlah anggota keluarga dan luas lahan garapan petani, maka semakin tinggi pula Partisipasinya dalam program ketahanan pangan.

Kata Kunci: Partisipasi, Petani, Program Ketahanan Pangan

ABSTRACT

This research is about farmer participation in food security program in Subak Pulagan, Tampaksiring Village, Tampaksiring District, Gianyar Regency. This study aims to find out how farmers participate in food security programs, what factors influence farmer participation in food security programs in Subak Pulagan, Tampaksiring Village, Tampaksiring District, Gianyar Regency. Determination of respondents in this study using a simple random sampling method (randomly) with the number of respondents 35 people, this study uses the methods: (1) Likert scale Farmer participation in food security programs., (2) using multiple linear regression method to determine the factors - What factors influence the participation of farmers in the food security program in Subak Pulagan, Tampaksiring Village, Tampaksiring District, Gianyar Regency. The results showed that the participation of farmers in the planning, implementation and utilization of food security programs in Pulagan subak was high, while their participation in the evaluation was still in the medium category. Overall, farmers' participation in the food security program in Pulagan subak is high, with an average score of 3.89% on average. Farmers' age and formal education have no significant effect on their participation in food security programs. The number of family members and the area of land cultivated by farmers have a very real influence on their participation in food security programs. The higher the number of family members and the area of land cultivated by farmers, the higher the participation in food security programs.

Keywords : participation, farmers, food security program
