Keywords: allergic cheilitis, hydrocortisone, kemicitin, treatment

Abstract

Cheilitis is a term to describe inflammation of the vermillion border of the lips. This case report describes compounding with a combination of hydrocortisone, kemicitin, lanolin and vaseline for the treatment of allergic contact cheilitis. Patients with complaints of lower lip feeling dry, cracked, sore and bleeding; dryness for 4 days ago. Dry lips getting worse for 2 days ago until bleeding. Objective examination revealed fissures, multiple, well-defined, irregular edges, 1-2 mm long; crusts, regular edges, clear borders, blackish red color; desquamation, multiple, irregular edges, clear boundaries, white color, rough surface. The patient was prescribed a combination of drugs of hydrocortisone, kemicitin, lanoline and vaseline and was instructed on how to use the drug and control it 7 days later. Treatment of allergic contact cheilitis with compounding combination drugs aimed at accelerating healing. However, the success of this case treatment is still based on a proper history so that it chooses a supporting examination and can establish a proper diagnosis.
